RESEARCH

In the past ten years my area of research has focused on topics such as: cultural visual tropes and traditions, the contingency of the artistic process and its multiple outcomes, the appropriation of

artworks and the delegation of authorship, the impact of digital imagery on our way of seeing and making images, the evocation of an absent or dematerialised body, the concepts of duration and dormancy, memetics and the generative processes of memory (as personal and collective history).

More recently I've been working on the discarded image, found photography and film, the cultural lexicons of research and collecting. Furthermore, in the past few years I focused on the theoretical researches by Jacques Didi-Huberman, Jaques Rancière and Hito Steyerl, exploring the relationship between visual documents, truth, plausibility and fiction, and questioning the processes of knowledge formation at the basis of contemporary culture and social schemata, as well as the communication of narratives through new media and web resources.
